

Week 8: Learning Theories

Design, Indigenous Pedagogies, and Revolutionary Frameworks

Key Readings

Ward et al.: Enactivism—embodied, embedded, enacted cognition

Resnick: Constructionism & Four P's (revolution not evolution)

Aikman: Indigenous education destroyed by capitalism

Rahman: Learning that "overshoots objectives"

Design Deck: Pedagogical profile reveals my commitments

Synthesis

Can we *design* for liberation, or is "design" a colonizing practice? Indigenous pedagogies create conditions for participation in life practices. Knowledge emerges through relationship, not expert intervention.

Technology isn't neutral. When we deny students access, we fracture embodied conditions where learning happens.

Discussion Question

Rahman describes learning that "overshoots its objectives." Yet institutions demand measurable outcomes. Is this resolvable through better design, or does it require fundamental transformation?

Reflection Question

When have I experienced learning as embodied and relational? What conditions made that possible? When has learning felt abstract and disconnected?
